

No Risk Automation

TAKING THE RISK OUT OF YOUR AUTOMATION PROJECTS

John Hayes, CEO and founder of No Risk Automation

We can save you from a costly mistake
From discovery to implementation choose No Risk Automation

Step 1 Application Study and Analysis

We provide a vendor agnostic study of your potential applications.

Our goal is to eliminate the risk associated with either wasting time on a poor project or overlooking applications that may have immediate positive return on investment.

Step 3 Vendor Selection

We can help you select a viable pool of vendors and establish a selection process that works in your favor.

The goal here is to not only exclude vendors that do not have the expertise for your specific project but to make sure that the best vendors are included.

Step 2 Specification Development

When you decide that it is time to pursue a project, we help by working with you to develop a specification.

Vendors write proposals based upon what you request. If you don't know what you need you will get what they want to give you.

Step 4 Project Manage

Once the system is purchased we work with you to make sure it is implemented correctly.

This is the most important part of our service as at this point you are dealing with a different group of people. In most companies this is where the margins are increased by change orders. We make sure it does not happen.
